Application/Control Number: 10/568,813

Art Unit: 3747

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 9-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Tuckey ('349).

In particular, Figures 2 and 3 of the reference teach an embodiment in which the two chambers are separated by a valve and the spring chamber can receive flow from line 52 via line 54. Note also that the spring chamber is closed.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 13-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pursifull in view of Tuckey ('349).

Pursifull teaches a fuel control system in which a flow control check is going to the engine is in parallel with a return excess pressure valve that relieves pressure in the line and allows flow back toward the fuel tank (18).

As noted above, Tuckey teaches a pressure relief valve for a fuel system that allows excess fuel pressure in the feed line to return to the fuel tank.

It would have been obvious to modify the system of Pursifull by using the relief of Tuckey in the feed line because both systems 3were common rail injection systems fed by similar, if not identical, electric pumps.

Page 3

Claims 15-16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Applicant's arguments filed 12/18/06 have been fully considered but they are not persuasive. In particular, the examiner has carefully considered applicant's arguments and cannot agree with his conclusions because the argument's are based upon facts that do not correspond to limitations in the claims. Applicant has attempted to limit the claims by stating that the first connecting conduit is connected to a fuel pressure line. Unfortunately, the examiner does not believe that this language eliminates line (52) as the "fuel pressure line." The arguments made talk about negative and positive pressures in the line, but no such limitations appear in the claims. Applicant's line is the positive pressure line from the pump, but the applicant hasn't even claimed a pump anywhere in the system. In order to avoid future rejections under Tuckey applicant needs to define his pressure line in more specific terms.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Carl S. Miller whose telephone number is 571-272-4849. The examiner can normally be reached on MTWTHF.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Steve Cronin, can be reached on 571-272-4536. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
